

Match the ecological problem with the description, choose the possible result and fill in the table.

A. The greenhouse effect	1. This includes dangerous gases that can destroy people's and other creature's health when breathing in.	I. Habitat loss
B. Endangered species	2. This is the removal of a group of trees from lands which are later used as farms, urban areas, etc.	II. Dangerous diseases like cancer
C. Water pollution	3. This occurs when the air around the Earth traps infrared radiation. This makes the planet become warmer, similar to the way a greenhouse becomes warmer.	III. Melting ice caps
D. Deforestation	4. This is the global rise in the planet's temperature. The climate all over the world becomes warmer and warmer.	IV. Extinct animals
E. Global warming	5. These creatures can become extinct in the near future.	V. Dangerous environment for sea and ocean creatures
F. Air pollution	6. This includes the release of toxic chemicals and materials into rivers, lakes, seas and the ocean.	VI. Drought and wildfires
